

YEOMAN

modern workflow

First things first

Yeoman and all the tools we'll talk about use **nodejs**

You'll need **git** too

Some tasks you'll use later requires **ruby**

Almost there

Let's finish the installation
npm & **gem** are your friends

A workflow story

Create repository

Create virtual host

Duplicate on local, dev, preprod, prod

Create base files, download dependencies

code

Compile less/sass & compile Coffeescript

Minify resources, optimize images ...

Refresh browser

Prepare to be production ready

Push it to production

”A L’AIDE !”

What can we do about it ?

Automation

Launch project

Code

Watch | Build

Deploy

meet Yeoman !

He's a man in a hat with three tools

YO

GRUNT

BOWER

YO ...

What ?

Yo scaffolds out a new application
Write your Grunt configuration
Pull in your dependencies

Yo generator-* ?

* make a **wish**

How about **making** a **presentation** about Yeoman ?

\$ yo

Grunt ?

It's used to build, preview & test

Building with Grunt

tasks

Watch

Watch and do whatever you want

Bower !

It's used for dependency management

\$ bower search

So ?

Hooray!
